

Blade and soul stuck at splash screen

I'm not robot  reCAPTCHA

Continue

Fantasy Spire, MMO-Spiele So I downloaded the game, but when I try to run it it gets stuck on the screen splash forever. I searched a lot all over the internet for a solution but found nothing. Any advice will be highly appreciated, thanks for your time. Exitlag Ad Hammytheboo Ad Hello Guest! AbsoluteSenpai17 Starter Thread Date Beginning February 1, 2019 Hi, I just got a BnS buddy and it's great and everyone so thank you for creating it. Now, my problem is that when I clicked play using a buddy bns and walked into it it was all right until I noticed that I was stuck on the first thing that comes when you enter the BnS, downloading a splash of screen art. It was frozen because I could move the loading circle when I hovered over the download splash art. I was wondering if you have any idea why he's doing this, or if there's already a fix? Some help would be very appreciated. Thank you for your time and effort. x - Sorry for the late response. Have you solved your problem? It sounds like a broken nvidia profile or FTH that could cause a cripple at download speed. You have to log in or register to respond here.
